

Relay Panels & Control Buildings

Power protection, monitoring and control has never been easier with new Protective Relay Panels and integrated Power Distribution Centers from Carter & Crawley, Inc. Offering multiple feeder protection, bus differential protection, capacitor bank protection, generator and transformer protection, these relay panels are ideal for T&D substation upgrades that improve reliability, communications and security. Complete design, fabrication, assembly and testing services are available for relay panels, SCADA & RTU cabinets and marshalling cabinets that are custom-made to your power distribution, protection and communication needs.

Protective Relay Panels from Carter & Crawley feature rugged welded frames and durable, attractive painting options. The precise wire routing, identification and attachment create a neat appearance and improved traceability for lower long term maintenance costs.

Time and money are saved when the relay and protection panels are engineered, fabricated, tested and delivered in a fully integrated drop-in building, as one coordinated solution. With the panels installed and all interconnect wiring complete, Carter & Crawley's control buildings feature battery backup systems with all necessary AC & DC Panelboards, Transfer Switches, Disconnects, HVAC and ventilation systems.
